

Proposed Event Name	Event Category	Brief Description of the Event	Target Participants	If Specific Department(s), please mention	Why should this event be included in the Mega Event?	TEAM / INDIVIDUAL EVENT	Is it Participation Event / Competition Event	Prequalifier Required (YES / NO)	Expected Duration	Resources / Venue Required
The Outliner	Non-Technical Event	This is a drawing event in which you will be given a certain sketch but you should think outside the box and draw what is not intended in the given sketch	Open to All Departments		This focuses on artist. I will we should include any one event focusing on them . This event challenges them and a very interesting event	INDIVIDUAL	COMPETITION	NO	2 Hour	Printed A4 sheets
SiteSprint	Technical Event	A real-world construction management challenge where teams act as site engineers and solve practical problems such as budget constraints, material shortages, safety issues, and design changes.	Specific Department(s)	CIVIL ENGINEERING	Unlike quizzes or model-building, it simulates the work of a real site engineer. It tests planning, leadership, technical knowledge, and the ability to make decisions under pressure. It's easy to organize, industry-relevant, and gives participants a realistic Civil Engineering experience.	TEAM	COMPETITION	YES		Class room
Structron	Technical Event	Structron is a hands-on structural engineering competition that challenges participants to design and construct a model structure using the materials provided. Teams must apply engineering principles, creativity, and problem-solving skills to build a stable and efficient structure capable of withstanding the maximum load applied during testing. Structures will be evaluated based on their load-bearing capacity, stability, structural efficiency, innovation, and overall performance. The team whose structure successfully withstands the highest load while maintaining structural integrity will be declared the winner.	Specific Department(s)	CIVIL ENGINEERING	This event promotes hands-on learning, teamwork, creativity, and practical application of structural engineering concepts. It challenges participants to design innovative, load-bearing structures, making it an engaging and impactful technical event.	TEAM	COMPETITION		1 Hour	building materials, testing load
Concept Clash	Technical Event	Concept Clash is a technical debate competition where two teams compete by presenting opposing perspectives on a given engineering or technology-related topic. Each pair of teams will be assigned the same topic, with one team defending the concept (Pro) and the other challenging it (Con). Teams must support their arguments with technical knowledge, logical reasoning, practical examples, and effective rebuttals. The team that demonstrates the strongest technical understanding, critical thinking, communication, and overall debate performance will be declared the winner.	Open to All Departments		Concept Clash promotes technical thinking, communication, and critical analysis by encouraging participants to defend and challenge engineering concepts. It creates an engaging platform for knowledge sharing, teamwork, and healthy competition, making it a valuable addition to the Mega Event.	TEAM			1 Hour	Classroom
Deep Dive Challenge	Technical Event	Participants will be given a topic related to a specific subject. They must quickly understand the topic, analyze it in depth, and present their insights within the allotted time. The challenge evaluates their technical knowledge, analytical thinking, and presentation skills.	Open to All Departments		To assess participants' ability to learn a new concept quickly, think critically, and communicate their ideas effectively.	INDIVIDUAL			1 Hour	Classroom

Brainstorm Battle	Technical Event	Round 1 – Qualifier: Aptitude Round 2 – Group Discussion: Discussion on a technical topic to assess communication, teamwork, and analytical skills. Round 3 – Final: Interview A civil engineering site pictures are provided to participants.They should find the defects in the site activity and write the reason behind it and how to overcome.	Open to All Departments		To discover and recognize future engineering leaders by assessing participants through technical screening, collaborative discussions, and real-world engineering challenge solving, fostering innovation, teamwork, and effective communication.	INDIVIDUAL		1 Hour	Classroom
Civil CBI	Technical Event		Specific Department(s)	CIVIL ENGINEERING	Valuable for Civil engineering..they can able to gain some technical related issues and knowledge	INDIVIDUAL		1 Hour	Classroom
Robo soccer	Technical Event	In this event you will a robo vehicle with the help of if you play soccer. Winner is based on number of goals	Specific Department(s)	MECHANICAL, EEE, ECE, EIE, IT, PRODUCTION	This is exciting event with captures many audience and it doesn't require big arena like robo wars	TEAM	COMPETITION	1 Hour	Arena for soccer
Flightcraft, Skyworks	Technical Event	Round 1: Participants must build a paper glider using only the materials provided by the organizers. The glider must be constructed within the stipulated time on the day of the event.After the construction phase, each participant will launch their glider. Round 2: The objective is to maximizeair time by applying sound aerodynamic principles such as wing design, balance, stability, weight distribution, and lift. Winners will be determined based on the longest sustained flight time, with tie-breakers decided using flight distance or stability, as specified by the organizers. Water rocketry is a nostalgic event which is done at higher level for more dramatic effect. This evaluation is based on flight distance along with travel mode	Open to All Departments		Unlike conventional paper-folding competitions, this event encourages participants to optimize their designs using principles of aerodynamics, making it both educational and competitive. It is accessible to students from all disciplines while still providing a meaningful engineering challenge.	TEAM	COMPETITION	2-Hours	
Water roleytry	Technical Event	Water rocketry is a nostalgic event which is done at higher level for more dramatic effect. This evaluation is based on flight distance along with travel mode	Open to All Departments		It can also be done as rocket launch but at expense of risk hence water rocketry is a safer and attracts more participants	TEAM	COMPETITION	1 Hour	Open ground and launcher
GEAR HEADS	Technical Event	A multi-round technical event designed to test automotive expertise. Round 1 consists of a written quiz covering internal combustion engines, modern automotive technologies, and component identification. Round 2 challenges short-listed participants with a hands-on mechanical assembly/disassembly task or a troubleshooting simulation under a fixed time limit.	Specific Department(s)	MECHANICAL, PRODUCTION	It bridges the gap between theoretical knowledge and practical application, specifically catering to core engineering students. It promotes healthy competition, tests problem-solving capabilities under pressure, and enhances core technical engagement within the symposium.	TEAM	COMPETITION	Half Day	seminar hall , machine shop
What If (Reverse Engineering & Debugging)	Technical Event	Explore what happens when electrical circuits are connected incorrectly. Analyze faults, predict circuit behavior, identify the cause, and suggest the correct solution. Test your troubleshooting, analytical thinking, and electrical safety knowledge through real-world scenarios.	Specific Department(s)	EEE, ECE, EIE	This event is valuable because it develops practical troubleshooting skills by teaching participants to identify and analyze circuit faults. It enhances critical thinking, strengthens understanding of electrical concepts, and improves safety awareness through real-world fault scenarios.	INDIVIDUAL		30 Minutes	Classrooms

Robo Rally	Technical Event	Robo Rally- Participants are required to design and build their own robotic vehicle to navigate a specially designed obstacle track. Multiple checkpoints will be placed along the course. If a robot deviates from the track, overruns, or is unable to proceed due to an obstacle, it will be repositioned at the last successfully crossed checkpoint, and the run will resume from that point with the prescribed time penalty. Only robots that comply with the specified design and technical regulations will be permitted to participate. Any robot failing to meet the eligibility criteria during inspection will be disqualified before the competition begins.	Open to All Departments		Obstacle Challenge is a hands-on technical event that encourages participants to apply engineering concepts to solve real-world mobility and navigation problems. Unlike conventional competitions, it combines design, fabrication, programming, electronics, and problem-solving into a single challenge, making it highly engaging for students from multiple engineering disciplines.	TEAM	COMPETITION	NO	Half Day	Ground
Industry 5.0 Challenge	Technical Event	Instead of paper presentation, Give real industry problems.Teams have 2 or 3 hours to prepare a solution and pitch it Shark tank style.	Open to All Departments	-	Providing real-time problems helps us evaluate how quickly they respond and how effectively they handle critical situations which is valuable in real life scenarios as well.	TEAM			2 Hours	Classroom, projector, internet
PRODUCT presentation	Technical Event	A Product Presentation is a technical event where participants showcase a fully designed, developed, tested, and functional product that solves a real-world problem. The product should be complete, demonstrate its intended functionality, and be ready for practical use or further commercialization. Participants explain the design process, working principle, technical implementation, testing results, and applications while demonstrating the product to the judges.	Open to All Departments		A Product Presentation event encourages students to transform innovative ideas into fully functional solutions by designing, developing, and testing real-world products. It enhances technical knowledge, creativity, problem-solving, teamwork, and presentation skills while promoting innovation and industry-oriented learning. The event also provides a platform for participants to showcase practical engineering solutions with real-world impact.				Full Day	Showcase place,with extensions needed(table and chair)

Code Detective – Speed Relay	Technical Event	Team size: 4 Total time: 20–25 minutes Round 1 (5 min): Bug Fix Member 1 fixes as many bugs as possible. Time ends → code is locked and passed to Member 2. Round 2 (5 min): Optimize Member 2 reduces time complexity and memory usage. Cannot start from scratch—must improve the existing code. Round 3 (5 min): Test Member 3 runs hidden test cases. Fixes edge cases and runtime errors. Round 4 (5–10 min): Explain Member 4 explains: What bugs were fixed Why the solution is faster Time complexity ($O(n)$, $O(\log n)$, etc.) Memory optimization Bonus Twist If a team finishes before the timer: They earn bonus points. Or they receive a harder optimization challenge for extra marks. Here the event organizer May increase or decrease the game time like each round may allotted to 15 min instead of 5 minutes.	Specific Department(s)	CSE /IT/AI/ML	This keeps the event energetic and rewards speed, teamwork, and coding quality, rather than just writing a working solution. It also resembles how developers work in real companies under time pressure.	TEAM	COMPETITION	NO	1 Hour	
REQUIREMENT RUMBLE	Technical Event	Teams interact with judges acting as clients to gather and clarify incomplete or ambiguous requirements. Participants must identify the actual needs of the client. ROUND 2: BLUEPRINT BUILDER Teams convert the gathered requirements into User Stories. Use Cases, Acceptance Criteria, and simple design artifacts such as wireframes or flow diagrams. ROUND 3: BUILD SPRINT Teams develop a working prototype based on their blueprint and modify it to accommodate a new requirement introduced during development.	Open to All Departments		Requirement Rumble simulates a real-world software development process, where participants transform client requirements into a working solution. It stands out by combining requirement analysis, design, and development, providing an industry-oriented and hands-on experience beyond traditional coding competitions.	TEAM			2 Hours	Lab and computers
AI workshop	Workshop / Seminar / Hands-On Workshop	Students or engineers need AI to work at this era so we need to give a workshop on how each and everyone can use AI and develop their career and give important AI tools	Open to All Departments		AI is a major breakthrough in this era and not using it is the biggest mistake you can make. The traditional idea of only CSE or IT student needs AI has fallen, but other students don't know any AI tools other than ChatGPT or Gemini hence proper introduction of more AI tools is needed		PARTICIPATION	NO	2 Hours	Seminar hall
